- The pipeline where the transducer is installed must have a long enough straight pipe section, of course, the longer the better, generally 10 times the pipe diameter upstream, 5 times the pipe diameter downstream, and 30 times the pipe diameter from the pump port. At the same time, ensure that the liquid in this section must be full.
- Make sure that the temperature range of the pipe under test is within the applicable range of the sensor, usually at room temperature.
- Take the corrosion or scaling of the pipeline into consideration. It is better to choose a newer pipeline for the measurement. If it is not available, subtract the corrosion from the pipe wall thickness or consider scaling as the pipe lining.

## Transducer Installation Method:

### 1. V-method Installation

It is the most widely used mode for daily measurement with pipe inner diameters ranging from 20 millimeter to 300 millimeter.

### 2. Z-method Installation

It is commonly used when the pipe diameter is between 300 millimeters and 500 millimeters.

### 3. W-method Installation

It is usually used on plastic pipes with a diameter from 10 millimeters to 100 millimeters.

**Features:**

- Digital display, easy to read.
- Battery-powered, low power consumption.
- High sensitivity and good repeatability, accurate to trace the flow rate.

## Safety Precautions:

The product is designed for use with general purpose gases such as air and nitrogen. It is advised that the products are best used for non-explosive clean gases. The sensors cannot be used for gas metrology of fluoride or fluoride containing gases. Use for other gases such as extreme corrosive and toxic may cause the product malfunctioning or even severe damages. The product sealing is ensured to work under working pressure of 1.0 MPa and is leakage proof before the shipment. But cautions and further leakage test are important at installation as well since any leakage could cause severe safety issue. The power supply for this product is 12~24 VDC, all precautions and measures for electrical voltage handling must apply.
